

EX-PROOF THERMAL IP-CAMERAS IN A COMPACT DESIGN

EC-840S-TIC-19I - Series

STAHL

The explosion protected EC-840S-TIC thermal cameras are perfect for effective video surveillance and process control in harsh settings where the presence of gases or flammable dust can create a potentially explosive environment, a reality often found in the oil and gas industries or marine and industrial sectors. The thermal cameras are able to detect a person or an object in the most difficult environmental conditions, such as total darkness or other levels of lighting, heavy smoke, rain or dust and across long distances. One striking advantage offered by the EC-840S-TIC cameras is their extremely easy and secure "plug and play" installation, with multipolar wiring. These cameras arrive ready to use, avoiding the complex electrical connections that are typical for this kind of device.

The housing is compact yet functional and is made entirely out of AISI316L stainless steel. Its resistance to corrosion is not only guaranteed, but is also enhanced by way of polishing processes. Another important feature of the cameras is the extended temperature range of -50°C to 65°C, along with a sophisticated cold start system, which allows it to operate in harsh environments as standard. An equally noteworthy point is that the IP66/IP68 ratings guarantee the complete protection against harsh weather and the submersion in up to 5 metres of water for 2 hours. The EC-840S-TIC range of cameras meets every installation need, providing maximum performance and excellent value for money.
